ENPM605 **Information Theory and Coding**

ENPM605 Information Theory and Coding; (3 credits) Grade Method: REG/AUD. *Prerequisite: A course in probability and some knowledge of random processes.* This course will study communication systems from a mathematical viewpoint and with the framework set up by Claude Shannon in 1948. This is achieved by viewing the information being communicated and also the noise and other disturbances in a communication system as stochastic processes and phenomenas. Information theory then shows, through a number of elegant coding theorems, the optimum performance that can be achieved with any communication system

These changes are different from, though could be linked with, historical and present anthropogenically-induced climate change. We will discuss the modern climate system, the factors capable of forcing climate change on various time scales, the geologic proxies of past climate change and what these proxies tell us. Finally, we will compare and contrast past climate change with what is understood (and not understood) about modern climate change.
